

T-Scan[®]

TMD/TMJ & HEADACHES

T-Scan[®] helps you uncover occlusal issues related to TMD by:

- Giving you accurate, digital data
- Identifying occlusal interferences that can cause muscular hyperactivity
- Revealing the percentage of force distributed throughout the bite
- Linking with Electromyography (EMG) to correlate occlusion to muscle function

T-Scan is the only dental product that gives you digital timing and force data relative to the patient's occlusion, making you more precise in diagnosing and treating patients with TMD.

Use T-Scan to identify and remove occlusal interferences that can negatively impact jaw joints and muscle function causing chronic issues such as: condyle displacement, bruxism, clicking, popping, headaches, neck pain, and more.

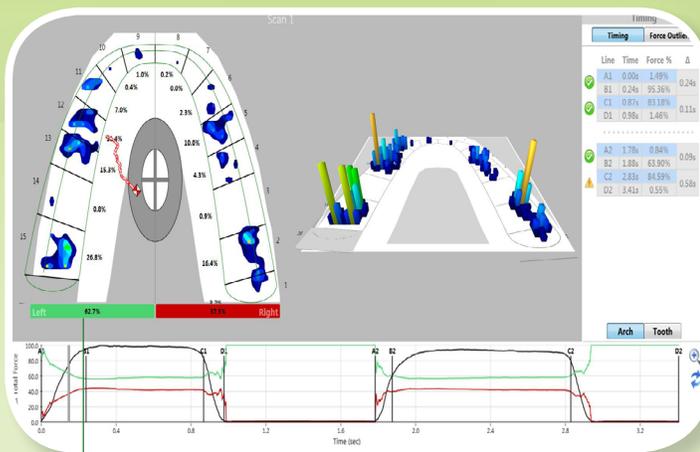

“I HAVE BEEN USING T-SCAN IN MY OFFICE FOR THE LAST FIVE YEARS. IT OFFERS THE ABILITY TO SEE OCCLUSION, BALANCE OF FORCE, AND TIMING IN A WAY THAT NO OTHER TECHNOLOGY CAN PROVIDE. THIS GIVES ME GREATER ACCURACY IN DIAGNOSING AND TREATING TMD ISSUES THAT ARE RELATED TO BITE FORCES. IT IS GREAT FOR PATIENT EDUCATION AS WELL. I CANNOT SEE MYSELF PRACTICING WITHOUT IT.”

Ben Sutter, D.M.D.

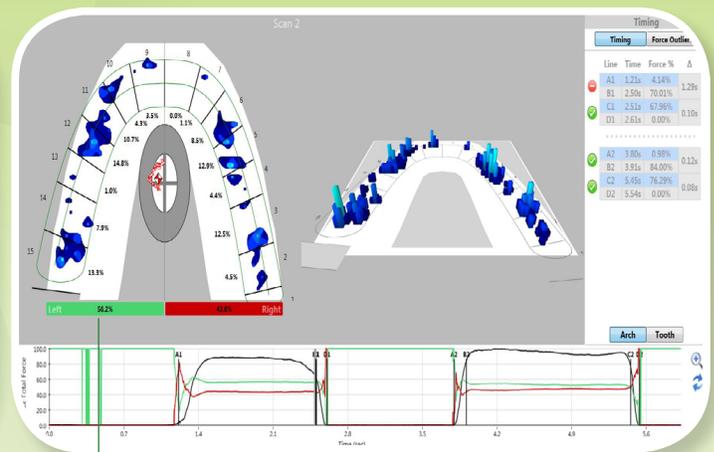

Identify Interferences and Quickly Remove Them:

BEFORE

63% of force on left side arch

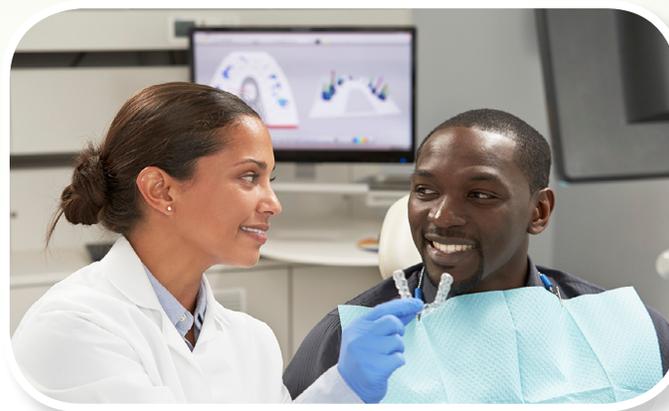

AFTER

56% of force on left side arch

Treat TMD Issues Accurately & with Confidence

- Educate patients on their occlusion, how it affects their TMD issues, and the treatment necessary to relieve them
- Identify and quickly eliminate destructive interferences
- Establish a baseline occlusion and monitor stability over time
- Reduce tooth mobility and relieve muscle stress
- Fit orthotic appliances comfortably in one appointment
